

MAPS AND MEASUREMENTS

Knowing where you are and where you are going will simplify your adventure. Maps and information will be given to you and may also be obtained through information centers in the city. Understanding the metric system will help keep you informed.

Converting distance, size and weight

1.62 kilometers	= 1 mile
1 kilogram	= 2.2 lbs.
1 liter	= 2.113 pints = 3.28 feet
1 gram	= .036 ounces
Km to miles	= Km x 1.16
Miles to Km	= miles x 1.61

Converting temperature

Fahrenheit to Celsius: $(F-32)$ divided by 1.8

Celsius to Fahrenheit: $(c \times 1.8) + 32$

Remember Ireland is a small country: the distance from the north of the country to the south at the longest point is 125 miles. The widest part is 112 miles. That is equivalent to the distance from Phoenix to Tucson.
