

Ebrary is a collection of ebooks, electronic versions of printed books on all different topics.

You can create links to ebrary content to accompany a specific course or for quick access to a favorite ebook. This feature is available either on or off campus.

To integrate ebrary content within a course:

1. Go to the PC Library ebrary website at <http://site.ebrary.com/lib/phoenixcollege>.
2. Search for a specific book or topic. Once you find the book, go to the top of your browser and copy the entire URL to your favorite text editor (Word, Notepad, WordPerfect, etc.). All ebrary URLs are standalone (meaning you can copy and past the link into a new browser and achieve the same result).
If you want to point to a particular chapter in the book, select that chapter and then copy the entire URL.
3. Copy the URL you saved in Step 2 and include the link in any of your content pages.
Be sure to include the library proxy address at the beginning of the URL:
http://ezproxy.pc.maricopa.edu:2048/login?url=
This ensures that students from off-campus can view the book.

For example:

<http://ezproxy.pc.maricopa.edu:2048/login?url=http://site.ebrary.com/lib/phoenixcollege/document/display.jsp?docID=10078492&page=1>
